2. LANDSCAPE PRINCIPLES

مبادئ تنسيق الحدائق

PROPORTION

Proportion is how the sizes of the various elements relate to each other. Ideally, no element—tree, shrub, pathway, or fence—should seem too large or too small compared with others.

RHYTHM

Rhythm creates a sense of motion as the viewer moves through the garden. Elements such as paving or wall surfaces can be repeated, alternated, inverted, or varied in size and color to guide the eye.

VIEWS & FOCAL POINTS

Views and focal points draw the eye to different distances and lead people through the garden. The best view may be beyond the garden itself, or from the house into the garden. Focal points may be a palm, a pond, a beautiful pot, or a statue.

ORDER

Order is established through the overall structure of the design and its components, such as trees and built elements. These are often aligned along a central axis, such as a view or a walk.

COLORS

Colors set the mood and create harmony or contrast. Use opposite colors (such as red & green or orange & blue) for vibrant impact, and similar colors (such as orange & yellow) for a soothing effect. Warm colors advance and draw attention; cool colors recede.

3. LANDSCAPE STYLES & DESIGN ELEMENTS

أنماط وعناصر تنسيق الحدائق

COLOR, FORM, LINE & TEXTURE

Color comes from more than flowers—it also comes from plants' bark and fruits.

Form refers to a plant's three-dimensional shape—tall and slender or short and broad.

Line refers to visual patterns in two dimensions—straight, geometric, curved, or flowing.

Texture relates to the size or feel of a plant or object. Fine textures come from small or soft leaves; coarse textures from bold, large leaves.

LANDSCAPE STYLES

Landscape styles reflect personal taste, surroundings and lifestyle. From the calm symmetry of formal gardens to the relaxed beauty of naturalistic spaces, each style creates a unique experience.

Popular styles include:

Formal symmetrical gardens, Naturalistic gardens, Dry gardens, Water gardens, Mediterranean style, Japanese style, Coastal style, Woodland style, Classical style, and Rock gardens.

4. GARDEN STYLES

أنماط الحدائق

INSPIRED BY NATURE & CULTURE

Garden styles have evolved over centuries, shaped by climate, landform, local materials, culture, and even religion.

STYLES THAT BLEND

As people travelled, ideas and influences crossed borders, and garden styles began to blend and inspire new creations.

YOUR GARDEN, YOUR STYLE

A successful garden doesn't follow a single style—it can be a thoughtful combination that reflects your taste, needs, and the character of your space.

“ The best gardens are not bound by one style, but shaped by the place, the people, and the story they tell. ”

JAPANESE STYLE

CLASSICAL STYLE

NATURALISTIC STYLE

MEDITERRANEAN STYLE

MODERN GARDEN

5. COMBINING STYLES

دمج الأنماط

Combining two or more styles can be highly effective when planned with care. It adds interest, depth, and personality to your garden.

CREATE GARDEN ROOMS

Divide the garden into smaller 'rooms' using trellis, pergolas, or ornamental hedges to define spaces and create a sense of intimacy.

USE STYLISTIC CONTRAST

Even in small areas, contrasting styles can make a big impact. A modern, formal pond can be beautifully balanced with soft, flowering borders.

LINK WITH CARE

Plan the transitions between areas carefully so that each space flows naturally and the overall design remains harmonious.

HARMONY IS KEY

The goal is balance—ensuring that every element works together to create a unified, cohesive garden experience.

DESIGN TIP

Good transitions—through planting, materials, or level changes—ensure a smooth flow and lasting beauty.

EVOLUTION
PROJECTS

1. LANDSCAPE

- Indoor plants, out door plants and grass of all types.
- Stones, concrete, marble and materials of all kinds.

In planning a landscape design, it is important to keep in mind the basic principles that compliment each other. If properly applied, these principles – unity, balance, transition, proportion or scale, rhythm, views and focal point, and order – ensure a garden that's pleasing to look at and be in.

UNITY

Unity gives a garden consistency. All the parts look as if they were meant to be together, and no one plant, structure, or feature dominates, unless it is intended as a focal point.

BALANCE

Balance can be achieved through symmetry in a formal garden (features on one side of an axis are mirror images of those on the other side) or by asymmetry (different features provide balance on each side of an axis, such as a path).

TRANSITION

Transition is handled with elements arranged in logical order so that the viewer's eye is drawn along. The draw might be a distant view outside the actual garden, or it could be changing textures, forms and size of leaves and plants along a path.

Good design is not just what it looks like. It's how it works, how it feels, and how it grows with nature.

2. Irrigation and water control Systems:

- Automatic and manual irrigation systems.
- Very low downtime.
- Durable and lasting efficiency, low maintenance cost.
- Power saving.
- Water saving.

AUTOMATIC IRRIGATION

LOW DOWNTIME

DURABLE AND EFFICIENT

POWER SAVING

WATER SAVING

Irrigation is defined as the artificial application of water to the crops to ensure adequate moisture for growth.

There are two basic types of irrigation that are suitable for landscape: sprinkler irrigation and drip or trickle irrigation. Sprinkler irrigation is generally used in lawns and vegetable gardens while drip irrigation which is defined as the frequent, slow application of water to the soil through mechanical devices called emitters is more suitable for watering individual plants such as shrubs and trees.

There are several important factors to be considered in planning for the irrigation system:

- ~ Irrigation needs of targeted crop or plants
- ~ Shape of the area
- ~ Soil type and intake capacity
- ~ Water source
- ~ Operational requirement (hours per day, automatic or manual, etc.)

SPRINKLER IRRIGATION

DRIP IRRIGATION

SMART CONTROLLER

PUMP STATION

RAIN SENSOR

A backyard swimming pool used to be a predictable feature of a landscape design, a traditional rectangular shaped pool or a circular one, but homeowners can now choose from a variety of new surfacing materials, shapes, high-tech lights and filters and features such as Jacuzzi, reefs, fountains, falls and many other extras, all intended to make the backyard pool more like a vacation destination.

Pools and spas are often the perfect backyard entertainment but it is also often expensive and requires maintenance.

Swimming pools come in all shapes and sizes, but nearly all of them work in the same basic way. They use a combination of filtration and chemical treatment to continually clean a large volume of water.

A typical swimming pool need these major components: a basin, a motorized pump, a water filter, a chemical feeder, drains, returns, and PVC plastic plumbing to connect all these elements. The basic idea is to pump water in a continual cycle, from the pool through the filtering and chemical treatment systems and back to the pool again. In this way, the pumping system keeps the water in the pool free from dirt, debris and bacteria.

TYPICAL POOL SYSTEM COMPONENTS

3. Swimming pools and Water Features

- Regular and irregular shaped swimming Pools.
- Healthy cleaning and filtering systems
- Water Gardens.
- Multi level water features.
- Ponds and artificial lakes.
- Fountains and Sculptures.

There are several types of pools or pool styles. The difference mainly lies on how the basin is constructed and each has its own advantages and disadvantages.

Above ground pools - these are the cheapest construction option, as well as the easiest to build. Most above-ground pools are made from prefabricated kits. The main disadvantage of this sort of pool is that it is less durable than other designs and generally less attractive. It is also less permanent, which can be a good thing—it's relatively easy to disassemble the pool and can be moved to a new location.

Fiberglass pools – these are made from fiberglass reinforced plastic, which has been molded into a basin shape. Usually, the pool is surrounded by a concrete deck structure. Although a bit more expensive upfront, a fiberglass pool more than makes up for the expense with significantly lower maintenance costs than other pool materials. A fiberglass pool can help with the long term costs and hassle of maintaining your pool. In addition, the smooth surface of fiberglass pools can help avoid any annoying snagging of your swimming clothes and skin as sometimes occurs with concrete lined pools.

Concrete (gunite) pools – these are the most popular and most customizable type of pool. Concrete pools are highly durable and can be customized to any shape and size. They can also be surfaced with a variety of materials such as plaster, pebble, tile, or natural stone. The main disadvantage is the higher initial cost and longer construction time.

Vinyl liner pools – these pools have a flexible vinyl lining that is placed inside a frame or a concrete wall structure. They are less expensive than concrete pools and the liner can be replaced if damaged. However, liners can wrinkle, tear, or fade over time and typically need to be replaced every 7–10 years.

ABOVE GROUND POOLS

- Cheapest option
- Easy to build
- Prefabricated kits
- Less durable
- Easy to disassemble and move

FIBERGLASS POOLS

- Molded fiberglass basin
- Surrounded by concrete deck
- More expensive upfront
- Low maintenance costs
- Smooth surface and comfortable

CONCRETE (GUNITE) POOLS

- Most popular
- Highly durable
- Fully customizable shape and size
- Multiple surface finishes
- Higher cost
- Longer construction time

VINYL LINER POOLS

- Flexible vinyl liner
- Less expensive
- Liner is replaceable
- Can wrinkle, tear or fade
- Replace every 7–10 years

BENEFITS OF A WELL DESIGNED POOL SYSTEM

SAVES WATER

IMPROVES PLANT APPEARANCE

REDUCES POLLUTION

UNIFORM WATER APPLICATION

KEEPS WATER CLEAN & HEALTHY

LOWER MAINTENANCE & COSTS

Effective irrigation begins with smart planning. Whether a water supply already exists or needs to be installed, our designs consider pressure, volume, plant needs and site conditions to deliver the right amount of water—uniformly and efficiently.

EXISTING WATER SUPPLY

When a water supply already exists, we design the system around its pressure and volume limitations.

PRESSURE & VOLUME CONSIDERATIONS

When the source is to be installed, the irrigation design determines the required water source and capacity.

UNIFORM APPLICATION

Water is applied uniformly at a rate the soil can absorb and in the amount each plant needs for healthy growth.

RUNOFF CONTROL

Properly designed systems prevent runoff, which can carry fertilizers and pesticides into streets, drains and groundwater.

WATER EFFICIENCY

A well-functioning system saves water, enhances plant appearance, reduces pollution and prevents over or under-watering.

4. Leisure areas, courtyards and Patios:

From art design to peaceful patio.

Art designs with function utilization.

Civil work design.

Ethnic designs matching all styles.

Shaded areas.

Climate Suitable designs.

Designing spaces for relaxation, connection and lasting memories

LEISURE AREAS

Leisure areas or backyard garden space is a wonderful gift to children. These areas can have platforms, seesaws, swing or a slide. Part of planning play spaces is a function of their age.

Young children should be kept close to the house so they can be easily watched and heard. Never include a pool or pond until the kids are older and reliable underwater.

Similarly, as you choose plants, avoid those that are thorny and certainly those that are poisonous.

A lawn can be an ideal play space but make sure to choose a grass that is tough enough and has some capacity to heal itself like Bermuda.

SAFE PLAY SPACES

FAMILY TIME

NATURAL & HEALTHY

SAFE & RELIABLE

COURTYARDS

Courtyard is an open space surrounded by walls or buildings, adjoining or within a building such as a large house or housing complex.

DECORATIVE SPACES

*an attractive
raised stone edging
to give highlight
to the flower bed*

Raised stone edging adds height, definition and structure to the flower bed, creating a natural focal point. It enhances the colors of the flowers, prevents soil erosion and gives the garden a neat and elegant look.

*a curving path
to draw the eyes
from side to side
that makes the
journey
more interesting*

Curving paths create a sense of movement and discovery. They lead the eye gently through the landscape, revealing each area gradually and making the journey more enjoyable and engaging.

*a stepping stone path
leading from the lawn
to a serene setting
that makes a
connection between
separate areas
of a landscape*

Stepping stone paths create a natural link between different spaces. They add charm, save space and blend beautifully with the surrounding greenery, inviting you to a peaceful and serene destination.

BENEFITS OF THESE LANDSCAPE FEATURES

ENHANCES AESTHETICS

Adds beauty, structure and visual interest.

GUIDES THE EYE

Creates movement and draws attention to key areas.

IMPROVES FUNCTIONALITY

Defines spaces and makes the garden more usable.

SUPPORTS PLANT HEALTH

Raised beds and paths improve soil and drainage.

INCREASES PROPERTY VALUE

Well-designed landscapes add value to your home.

A lawn doesn't stay beautiful on its own. Wear and tear—along with its harmful natural and unnatural causes can ruin a garden. With proper care and maintenance, a property can stay healthy and beautiful all year long. These are the general scope of horticultural activities that is necessary in maintaining a lawn as well as the services we offer for maintenance.

1. Watering of plants as required.

2. Cleaning of foliage, planters, and bed aeration as required.

3. Pruning / trimming as required.

4. Fertilizer application as required.

5. Pest & disease control as required.

6. Replacement of plants as required.

7. Rubbish collection & disposal from green area.

8. Maintenance of existing irrigation system without spare parts and pump system.

9. Other necessary external horticultural practices.

WHAT WE CAN DO

DESIGN

Creative and functional landscape designs.

BUILD

Expert installation with quality materials.

MAINTAIN

Regular care for healthy, beautiful outdoor spaces.

IRRIGATE

Efficient irrigation systems for water conservation.

ENHANCE

Add features that bring life, beauty and value.

SUPPORT

Reliable service you can count on all year round.

SOFT LANDSCAPE

We create green spaces that inspire and last a lifetime.

BEAUTIFUL ENVIRONMENTS

SUSTAINABLE SOLUTIONS

BETTER LIVING

Landscaping is more than just grass laying, plant setting and flower arrangement. Gardeners and landscapers are always under the challenge of designing fine innovative gardens and choose the right features for implementing in view of the suitability of the choices with all factors and standards of landscaping.

It has been said that "a garden is a reflection of one's personality". For Garden Art, adding the client's personal ideas is as important as all the other elements of landscaping. We will be glad to do a garden guided by those ideas that translates the uniqueness of character of our clients.

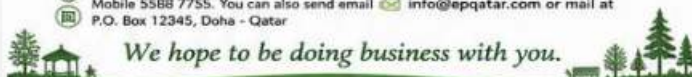

Landscape styles and trends change over time... Garden Art primarily aims to keep up with those changes... That is why, Garden Art along with its highly skilled Agricultural Engineers, Design Architects, Technicians, Horticulturist and other personnel develop and formulate ideas to present and create modern and fashionable designs for our valued clients without compromising the standards of quality in landscaping.

So, if you're thinking about having an artistic landscaping for your space, then Garden Art will definitely give that to your place.

For inquiries, you can contact us at 3135 1971 or send fax to 4444 8888 Mobile 5588 7755. You can also send email info@epqatar.com or mail at P.O. Box 12345, Doha - Qatar

We hope to be doing business with you.
